

Program Outline:

The focus of this program is to enhance service delivery through the application of Asset Management techniques and methodologies. The modules covered in this course equip attendees in methodologies to develop AM plans and strategies in accordance with Guidelines and the International Infrastructure Manual.

- Asset Hierarchies and Levels of Service
 - How to get this right?
 - What is fit for purpose?
 - Star Rating concepts – do they always work?
- Service Centric Asset Management Planning
 - It is not about assets.
 - It is about the services and the level of service.
 - How to measure LoS.
- Long Term Financial Planning Methods
 - Strategic financial models.
 - Operational capex models.
 - Depreciation models.
- Asset Assessments – what works and why:
 - Condition assessments.
 - Risk assessments.
 - Maintenance inspections.
 - Asset Functionality and Capacity assessments.
- Demand Management and Asset Management Plans
- AM strategies and policies
- Asset Accounting
- Depreciation Methods
