

ACEAM delivers a one-day comprehensive training program in Road, Footpath Inspection and Works Management

This program is specifically designed for Local Government, Contractors and Public Utility Companies requirements and is based on the principles of good practice asset management. It covers the principles of Road Management Act, Inspection Planning, Defect and Risk Identification, Works Planning and Scheduling, Record Keeping in accordance with Road Management Plans.

The main feature of the training program is its **hands on tasks**, based on maintenance management, inspections, scheduling and prioritising, including assessment of defects and risks using simulated environments.

What would you achieve by attending this program?

- A broad understanding of Codes of Practice and Road Management Plan interpretations in lay-person's terms and a general understanding of how the road management act has been implemented in Victoria. Whilst the Act does not yet apply in the other states, the principles of the Act including, inspection planning, maintenance standards and works scheduling/ prioritisation of grass root level are universally applicable.
- Defect and Risk identification as per councils Road Management Plan, Industry Practice Guidelines and Best Practice.
- Defect measurement and recording as per local government specific inspection manual.
- Calculating risk scores, defect interventions, condition scores and data recording.
- Developing work priorities based on risk condition and asset hierarchies, works planning and scheduling in accordance with road Management Plans.
- Inspection Planning.

Who should attend?

- Asset Officers
